

LESSON - 8

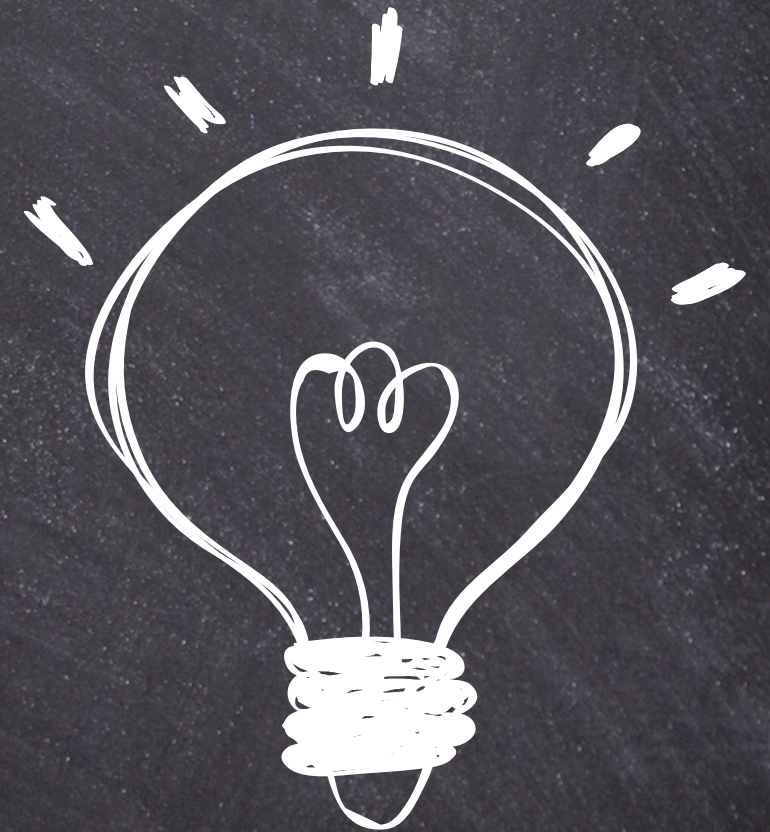

SELECT * FROM

SELECT

SELECT is the most common statement used, and it allows us to retrieve information from a **table**.

Later on we will learn how to combine **SELECT** with other statements to perform more **complex** queries.

Select - Select Data from Tables / DB

The SELECT command in SQL is used to retrieve data from a database.

Syntax:

```
SELECT column1, column2, ...  
FROM table_name;
```

Syntax:

```
SELECT * FROM table_name;
```

WARNING : Be careful when selecting records. with * ALL columns will be selected!

Distinct & Alias -

The Distinct command in SQL is used to retrieve Unique data from a table.

Syntax:

```
SELECT DISTINCT column1, column2, ...  
FROM table_name;
```

Syntax:

```
SELECT DISTINCT column1, *  
FROM table_name;
```

Syntax:

```
SELECT DISTINCT column1 as c1, column2 c2, ...  
FROM table_name;
```

Order By.

The ORDER BY keyword is used to sort the result-set in ascending or descending order.

Syntax:

```
SELECT column1, column2, ...  
FROM table_name ORDER BY column1 asc/desc;
```

Syntax:

```
SELECT column1, column2, ...  
FROM table_name ORDER BY column1 asc, column2 desc;
```

Limit & Offset

The LIMIT clause is used to set an upper limit on the number of tuples returned by

Syntax:

```
SELECT DISTINCT column1, column2, ...  
FROM table_name LIMIT 5;
```

Syntax:

```
SELECT DISTINCT column1, column2, ...  
FROM table_name LIMIT 5 OFFSET 10;;
```

WHERE

The WHERE clause in SQL is used to filter records based on specified conditions. It is commonly used in SELECT, UPDATE, DELETE, and INSERT statements.

Syntax:

```
SELECT column1, column2, ...  
FROM table_name WHERE condition ;
```

Syntax:

```
SELECT column1, column2, ...  
FROM table_name WHERE condition1 & condition2 ;
```
